$$d'' = 0.17'' \rightarrow d = 170 \text{ km}$$

$$D_1 = D_2 = 85 \text{ km}$$

$$P_{\text{orb}} = 16.5 \text{ h}$$

$$M_1 = M_2 = 4.12 * 10^{20} \text{ g}$$

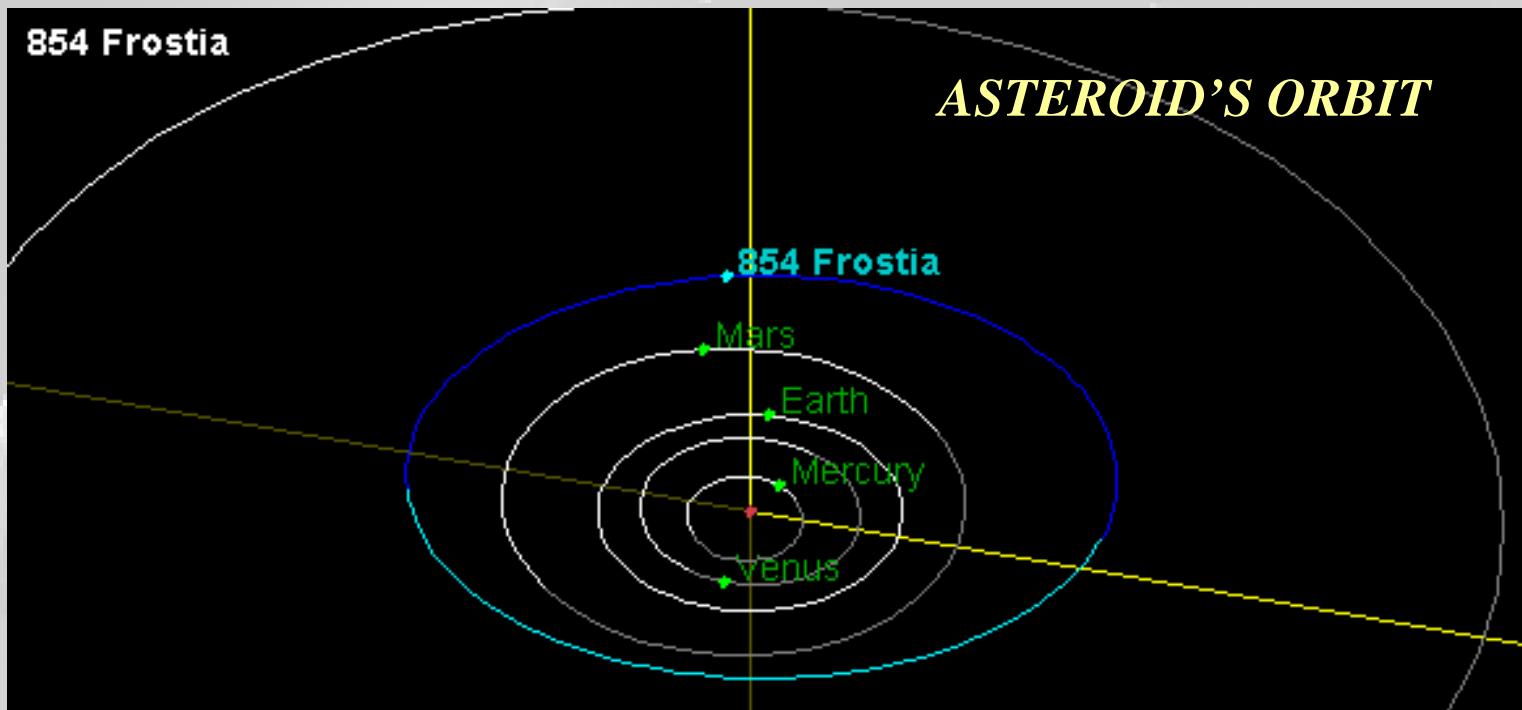

$$\rho = 1.3 \text{ g/cm}^3 \pm 0.4 \text{ g/cm}^3$$

**Model Parameters...**

Makes a model of sources, look at it at the (u,v) positions  
of a template uv table (default: the last positions obtained with the UV Coverage panel)  
Explore its value with the UV EXPLORE panel  
Info: Unless template table was computed with a different wavelength,  
the fourier transform will be performed at current 10 microns.
