**Welcome to the JMMC**

The JMMC is the French Center for Infrared and Optical Interferometry. It provides support for the users of the astronomical interferometers currently in operation around the world. The picture on the left shows the French Grand Interferomètre à Deux Télescopes (GI2T).

The [Very Large Telescope Interferometer](#) is today the leading astronomical interferometer. It allows the coherent combination of three of the telescopes available at the Cerro Paranal observatory: four 8m Unit Telescopes and four moveable 1.8m Auxiliary Telescopes. Once fully operational, the VLTI will provide both a high sensitivity as well as milli-arcsec angular resolution with interferometric baselines of up to 200m in length.

---

**JMMC NEWS**

**2005-04-15 Tâche de Service JMMC pour 2005:**  
Réalisation d'une interface entre des modèles astrophysiques et le logiciel "Model fitting" développé dans le cadre du JRA4 d'Opticon. Le JMMC est maître d'œuvre du logiciel interférométrique européen développé dans le cadre du JRA4 d'Opticon. Le module "Model fitting" de ce logiciel permettra d'ajuster des modèles géométriques simples aux observables interférométriques (visibilité, clôture de phase et phase différentielle). Il existe une forte demande de la communauté de pouvoir ajuster des modèles astrophysiques complexes aux observables interférométriques. La tâche de service proposée consiste à développer une interface entre le module "Model fitting" et des modèles astrophysiques. Cette interface devra être indépendante du modèle astrophysique considéré. Les candidats sont priés de se mettre en contact avec Alain Chelli ( [chelli@obs.ujf-grenoble.fr](mailto:chelli@obs.ujf-grenoble.fr) ) avant le dépôt de leur dossier de candidature CNAP.

**2005-03-01** The ESO [Call for Proposals](#) for AMBER and MIDI is open (deadline: 1st April 2005)

Revision: 1.0

Page 4/21

## 2.1 Upper logos

The two images `jmmc_large.jpg` (left, 171 x 47 pixels, centered) and `jmmc_logotext.gif` (right, 430 x 57 pixels, justified left) are inserted in a 800 x 57 pixels table.

## 2.2 Upper navigation bar

Three links to static HTML pages are permanently present on this bar, separated by “|” characters.

The font is “Arial,sans-serif”, the size is 90%, and the color is #006699 (light blue). The links are underlined when the mouse is on them (standard behavior).

The links are the following:

```
Home -> index.htm
Links -> links.htm
Search -> search.htm
```

The total height of the upper band is set in the CSS to 70 pixels, and is delimited by a single line of 1 pixel, with color #cccccc (very light grey).

## 2.3 Left navigation bar

The left navigation bar is composed of 14 items, with direct links to static HTML pages, with and without frames.

They are enclosed in a dedicated thin box of 1 pixel with color #EEE. The font is “Arial,sans-serif”, the text size is 90%, and the text color is #006699 (light blue). The background color is #F8F8F8 (very light grey).

The main categories are separated by thin 1 pixel lines with color #cccccc. As set by the CSS, the link backgrounds are greyed when the mouse of the user is on them (color #FFFFFF), and the font is underlined (standard behavior).

## 2.4 Central body

**Welcome to the JMMC**

The JMMC is the French Center for Infrared and Optical Interferometry. It provides support for the users of the astronomical interferometers currently in operation around the world. The picture on the left shows the French [Grand Interféromètre à Deux Télescopes \(GI2T\)](#).

The [Very Large Telescope Interferometer](#) is today the leading astronomical interferometer. It allows the coherent combination of three of the telescopes available at the Cerro Paranal observatory: four 8m Unit Telescopes and four moveable 1.8m Auxiliary Telescopes. Once fully operational, the VLTI will provide both a high sensitivity as well as milli-arcsec angular resolution with interferometric baselines of up to 200m in length.

**2005-03-01 The ESO Call for Proposals for AMBER and MIDI is open (deadline: 1st April 2005)**

This is where the main text is located. The text is usually contained in a transparent table whose first line is a title composed with blue (#000092) and/or green (#006600) characters (to emphasize one part of the title for instance). The font is "Arial,sans-serif", the size is 114%.

The cell margin is 8 pixels in all directions. The email addresses are generated as images to avoid spamming.

The page is split in two sections: the "welcome" section and the "news" section, that are separated by a solid line. Their content is still under definition.

The text itself is composed of "Arial,sans-serif" characters which size is 80%, and the color #333333 (dark grey). Bold characters with this same color, or green (#006600) can also be used within the text.

The hypertext links are naturally colored #006699 (light blue) by the CSS.

## 2.5 Sample HTML source code

Below is the HTML code for the index.htm page pictures in previous sections.

```

## 3 Framed web pages

### 3.1 “Development” upper navigation bar and frameset

In order to enable the use of dynamically generated web pages and other advanced web features, framed version of the upper navigation bar has also been designed.

This navigation bar contains 7 links to static HTML pages, with or without frames.

The logos and navigation bar have the same design as the static pages described in Sect. 2.1 and 2.2. The upper frame is 92 pixels thick, and the bottom frame is unlimited.

### 3.2 Navigation bar source code

```

### 3.3 Frameset source code

This defines the properties of the frames within the navigator window. The upper frame is 88 pixels high, and the lower frame is unlimited.

```
<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Frameset//EN"  
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-frameset.dtd">  
<html xmlns="http://www.w3.org/1999/xhtml">

<meta http-equiv="Content-Type" content="text/html; charset=iso-  
8859-1" />  
<title>JMMC - Internal</title>  
</head>  
  <frameset rows="88,*" frameborder="no">  
    <frame src="top_menu.htm" name="top_frame" scrolling="No"  
noresize="noresize" />  
    <frame src="http://mariotti.ujf-grenoble.fr/twiki/bin/view/"  
name="bottom_frame" scrolling="Auto" />  
</frameset><noframes></noframes>  
</body>  
</html>
```

## 4 Server Side Configurations

### 4.1 General statements

Our web pages actually are distributed by two web servers. The first one ([www.jmmc.fr](http://www.jmmc.fr)) runs main JMMC web site and is managed by the 'Observatoire de Grenoble'. The second one ([apps.jmmc.fr](http://apps.jmmc.fr) or [jmmc.fr](http://jmmc.fr)) hosts application related pages. Every web pages and related material should be modified with versioning control ( cvs was choosen ) in the right module ( see paragraph 4.3. ).

### 4.2 File Locations

On the JMMC servers, most of web material should be placed into default installation directories. It often is a good choice according system upgrades. It seems better to upgrade a system modifying multiple separated configuration files than to use equivalent part digged into the old configuration file. The main point is that new configuration files and directory structure follow the general usage which generally is a mature solution. Next given paths were taken from Mandriva distributions.

#### 4.2.1 Web Server Configuration files

Location: `/etc/httpd/`

The `/etc/httpd/conf.d` should be used to modularize main configuration. Then it is possible to add a new subdirectory with its configuration. It often is just an alias definition.

E.g.:

`/etc/httpd/conf.d/99_foo.conf` could link served pages with files located under the file system directory `/var/www/foo/` using next configuration code:

```
Alias /foo /var/www/foo
<Directory /var/www/foo>
    ...what ever you want...
</Directory>
```

then the next URL could show files under `/var/www/foo`:  
`http://myserver/foo`

(it is much better than to use link over the filesystem)

#### 4.2.2 Web Pages, CGIs and web contents

All should be placed under the same directory `/var/www`

default content of `/var/www` is:

```
/var/www/html & /var/www/cgi-bin
```

### 4.3 Versioning control of Web Pages, CGIs and web contents

Access can be done through ssh using next variables:

```
CVS_RSH=ssh
```

```
CVSR00T=:ext:login@cvs.jmmc.fr:/cvs/www
```

Several modules exists, but main web site is handled by the 'jmmc-html' one

Users who want to work on this modules must have an account on cvs.jmmc.fr.

[webmaster@jmmc.fr](mailto:webmaster@jmmc.fr) user is dedicated to publish web pages. It's home directory contains several links to checkouted modules:

- test-jmmc-html aims to test web content (affects web test area <http://jmmc.fr/~webmaster>)
- real-jmmc-html aims to distribute web content (affects main web <http://www.jmmc.fr>)

Normal cvs operations order can be:

- update module
- modify, add or remove web files
- commit

Since real-jmmc-html directory is dedicated to distribute final version of web site, webmaster should only proceed to cvs update after a validation test onto web test area.
